Dynamic Map and Standardization for Automated Driving Systems

Special Interest Session #20
Evaluation and standardization of connected and automated road transport
October 12, 2016

Jun Shibata
Convenor, ISO TC204 WG3 and Senior Researcher, JDRMA

Agenda

- ✓ **Use Cases for Automated Driving Systems (ADS)**
- ✓ **Key Requirements for ADS**
- ✓ **Ideas for Digital Infrastructure**
- ✓ **Scope of SIP-adus**
- ✓ **Dynamic Map (Concept, Roles)**
- ✓ **Requirements for Dynamic Map Standardization**
- ✓ **New Work Item (Scope, Schedule, Title)**
- ✓ **WG3 Standardization Activities for ADS and C-ITS**
- ✓ **Large Scale Verification Test for ADS**

Use Cases for Automated Driving Systems (1)

Action of red vehicle against merging vehicle

Example of lane-level location referencing and road environment recognition by V2I & V2V communications and highly precise map

V2I 路車間通信

detector 車両感知器

車車間通信

V2V

車両感知器の設置位置 position of detector

relative distance 自車 相対距離

相対距離

自車 相対距離

position of ego-vehicle
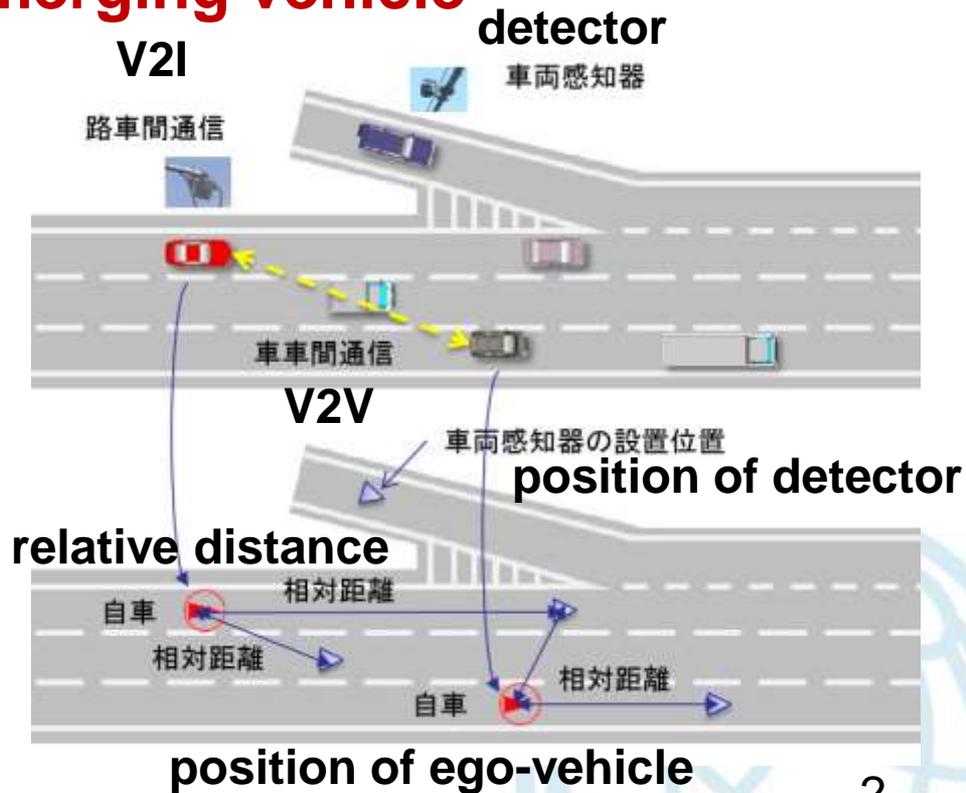

Use Cases for Automated Driving Systems (2)
Right turn at intersection

Example of lane-level location referencing and road environment recognition by highly precise map

road data
道路データ

highly precise map (lane-level)

right turn

交差点通過
passing through intersection

交差点
intersection

走行ライン
track
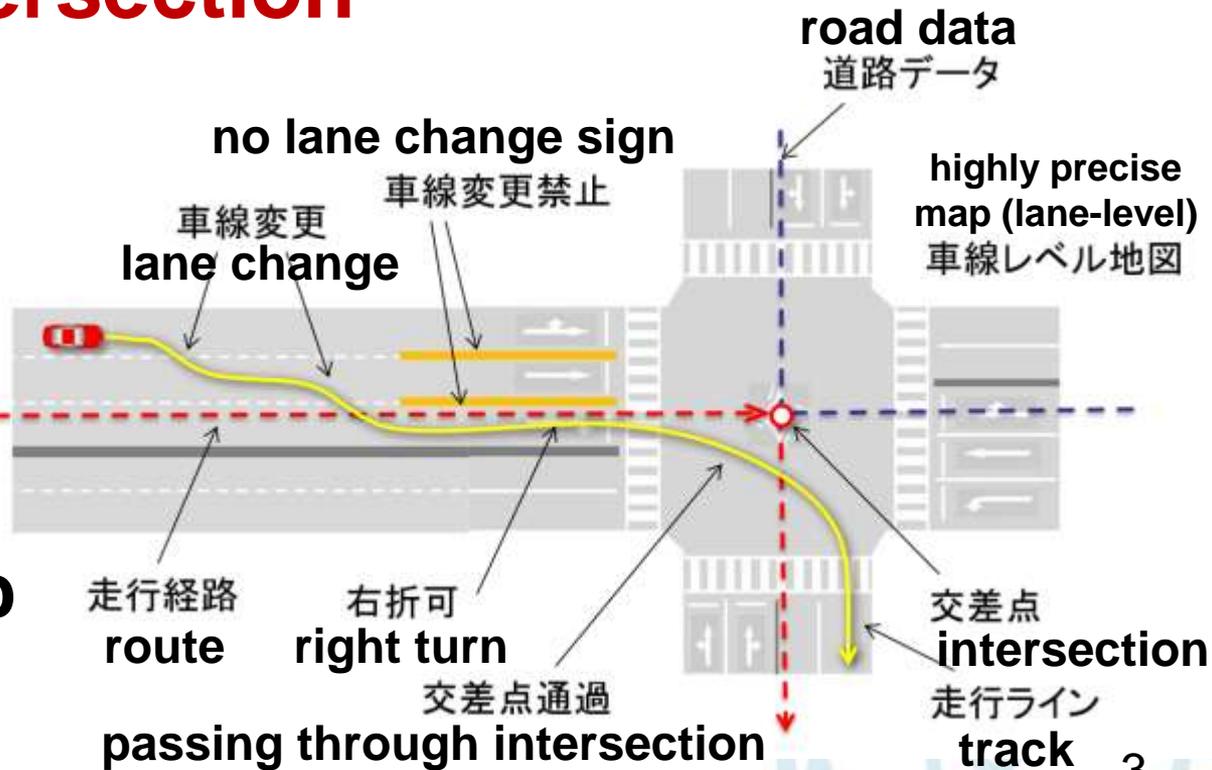

Key Requirements for ADS

✓ **Lane-level Location Referencing**

✓ **Road Environment Recognition**

…called as "Digital Infrastructure"

DI=Digital representation of road environment required by Automated Driving Systems, C-ITS, and Advanced Road/Traffic Management Systems

✓ **Highly precise and highly up-to-date digital map + dynamic information including 3D-image**

4

Ideas for Digital Infrastructure

✓ **Local Dynamic Map for C-ITS (SAFESPOT, EC)**
  …short range, vehicle-centric
✓ **Dynamic eHorizon for ADS (Continental AG)**
  …short to middle range, cloud sourcing
✓ **Dynamic Map for ADS (SIP-adus, Japan)**
  …short range to wide area, vehicle+center, cloud sourcing

5

Scope of SIP-adus (2014-2018)

Cross-Ministerial Strategic Innovation Promotion Program
Innovation of Automated Driving for Universal Services

(I) Development and verification of automated driving system

(III) International cooperation

Road Transport system

Driver

Recognition	Judgment	Operation

(5) System Security

(4) HMI & Driver Model

Traffic environment

Recognition	Judgment	Operation

(1) Dynamic Map

(2) Prediction based on ITS information

(3) Sensors

Area of Competition

Vehicle

Area of Cooperation

(1) Open research facility
(2) Social acceptance
(3) Technology transfer

(1) Enhanced local traffic management
(2) Next generation transport system

(IV) Development for next generation urban transport

(1) Traffic fatality reduction effect estimation method & national shared database
(2) Macro and micro data analysis and simulation technology
(3) Local traffic CO_2 emission visualization technology

(II) Basic technologies to reduce traffic fatalities and congestion

6

Dynamic Map Concept (1)

Advanced road traffic information database (=digital infrastructure) for all vehicles

Update timing

Linked layers

Dynamic (< 1 sec)

Semi-dynamic (< 1 min)

Semi-static (< 1 hour)

Static (<1month)
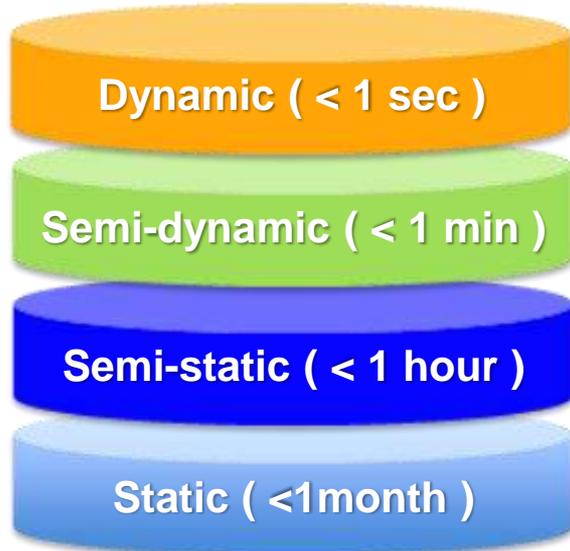

layered structure by update timing

Link
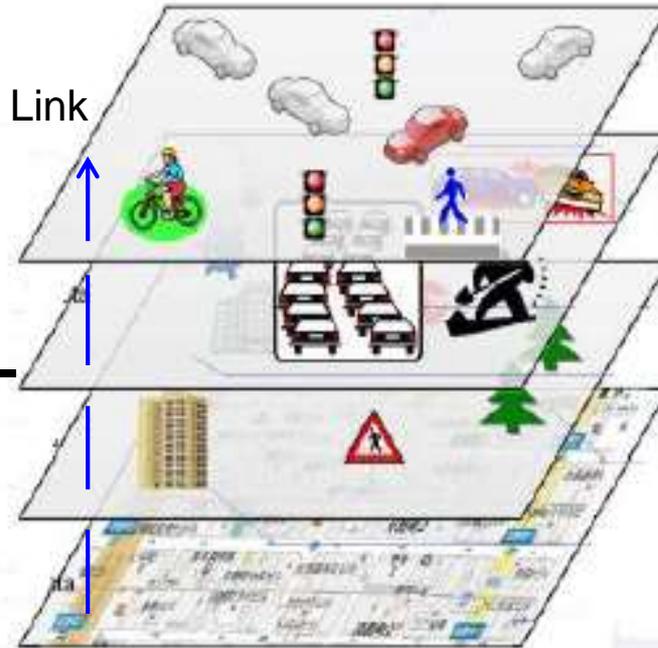

Basic Map

*Source: SIP-adus, Advanced Map Task Force

Information through V to X
- surrounding vehicles
- pedestrians
- timing of traffic signals

Traffic Information
- accidents
- congestion
- local weather

Planning and Forecasting
- traffic regulations
- road works
- weather forecast

Basic Map Database
- digital cartographic data
- topological data with road facilities

7

Dynamic Map Concept (2)

Dynamic information

動的データ

動的データ（動的情報、准動的情報、准静的情報）
車両、人（歩行者、二輪車等）、信号を点で定義
渋滞情報、規制情報を線で定義

Competitive

Cooperative

Foundation for LR

Dynamic Map Concept (3)
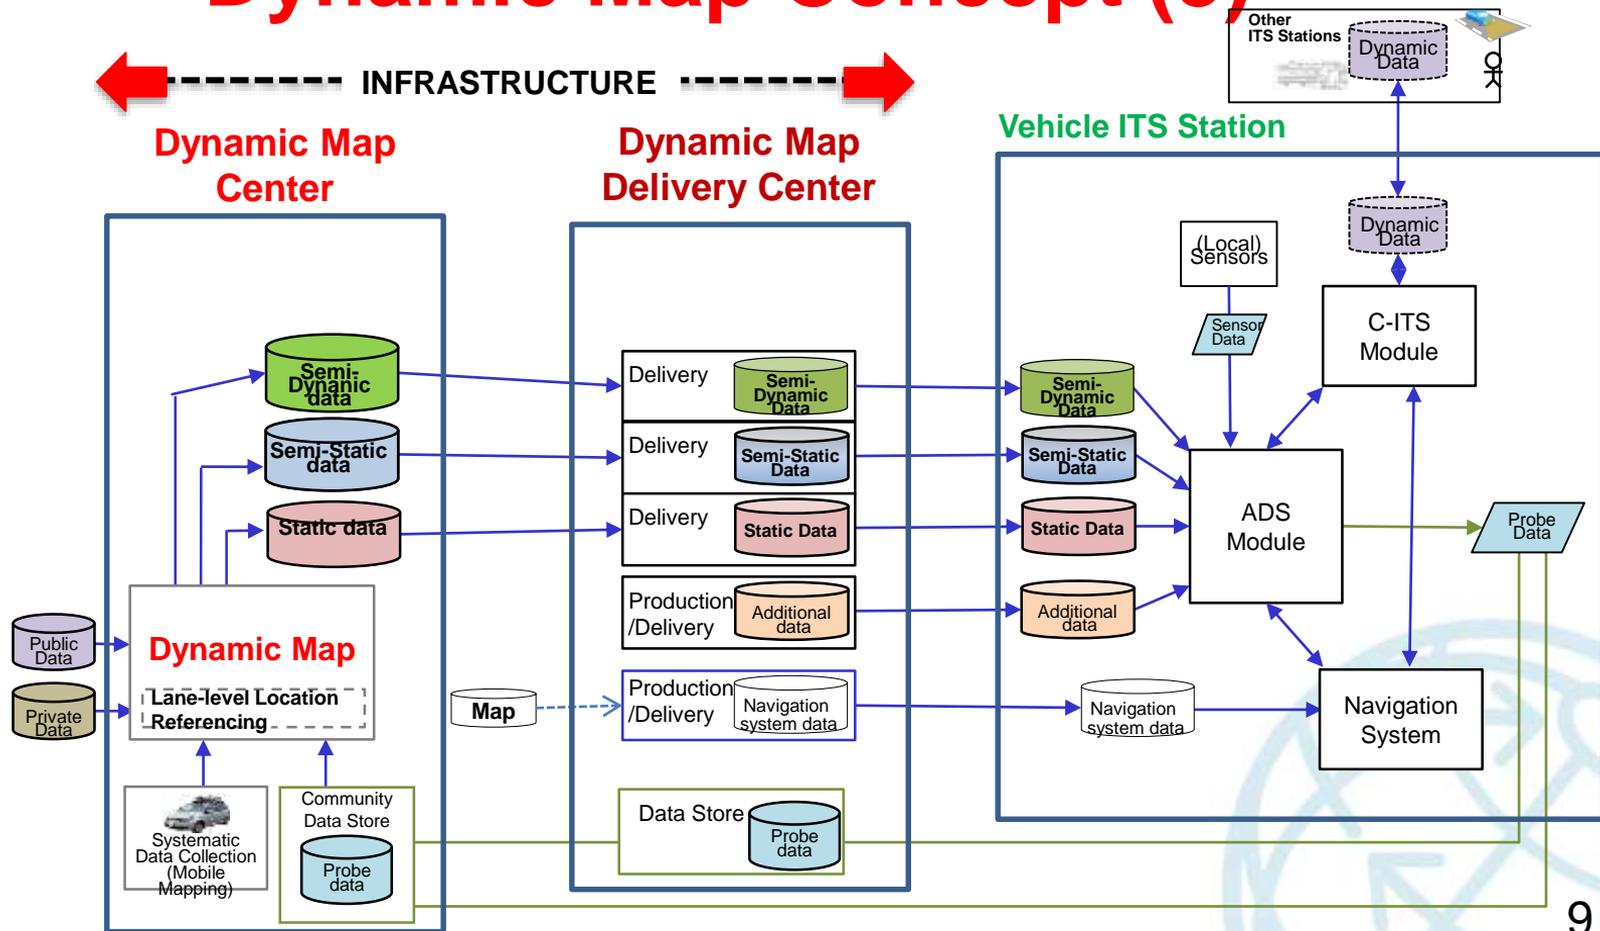

Roles of Dynamic Map (1)

✓ **at Dynamic Map Center (DMC)**

  ✓ **To keep traffic situation up-to-date at entire city level**

  ✓ **To generate semi-dynamic and semi-static information**

✓ **at Delivery Center (DC)**

  ✓ **To deliver specific information to specific vehicle**

  ✓ **To deliver semi-dynamic and semi-static information to vehicles**

✓ **at Vehicle ITS Station**

  ✓ **To provide specific vehicle(s) with specific information within limited area (intersection, merging section,…)**

 ✓ **To provide vehicle(s), DC, and DMC with dynamic information**

10

Roles of Dynamic Map (2)

✓ **Wide-area perceivable capability allows Dynamic Map (Center) to play way more considerable role in Advanced Road/Traffic Management Systems in addition to ADS and C-ITS**

  ✓ **To increase supportive stakeholders**

  ✓ **To reinforce business models**

Requirements for Dynamic Map Standardization

✓ **To enable unified process of static/ dynamic information at centers and vehicles to make various APs compatible among DMC, DC and Vehicle ITS Stations**

✓ **First priority area is to standardize identical data model for static/dynamic information in Dynamic Map at DMC, DC, and Vehicle ITS Stations -> See next slide**

12

Scope of New Work Item
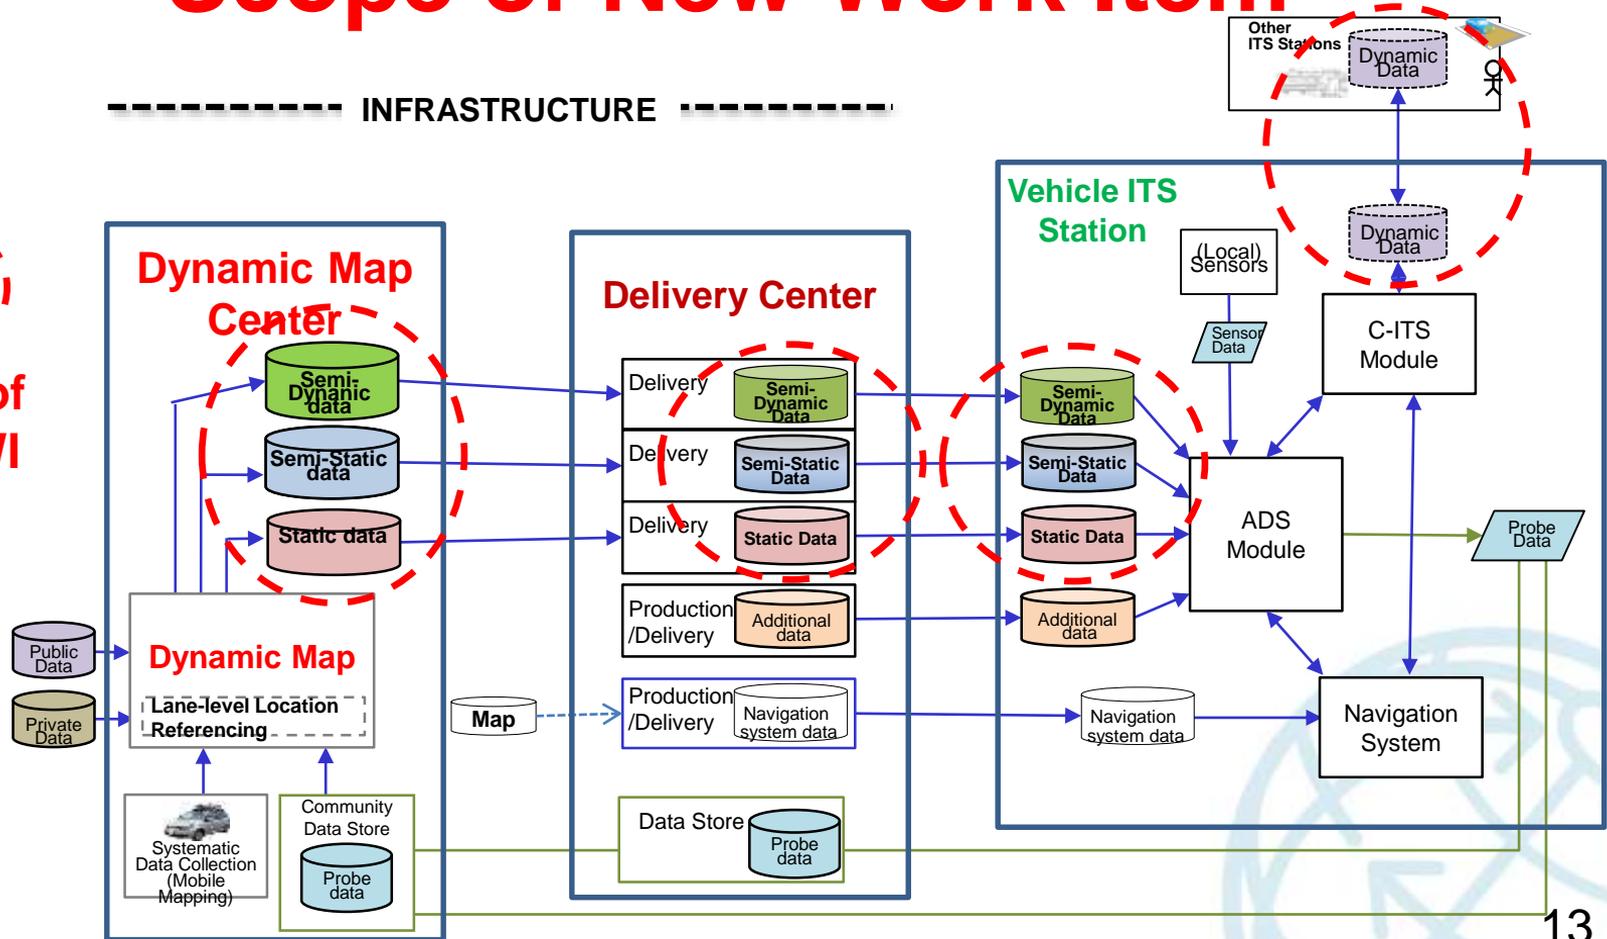

Schedule/Title of New Work Item

- ✓ **Approval expected in next spring (2017)**
- ✓ **IS publication expected in 2020**
  - ✓ **Tentative title: Map database specifications for applications of ADS, Cooperative ITS, and Advanced road/traffic management systems**

14

ISO TC204 WG3
Standardization Activities for ADS and C-ITS

Under development:

✓**PWI 20524: Geographic Data Files 5.1**
  - ✓To specify map feature, attribute, and relationship for Automated Driving Systems (ADS), C-ITS, and Multi-modal Navigation (IS in 2018)

✓**PWI 21718: Spatio-temporal Data Dictionary**
  - ✓To assemble data dictionary covering ADS and C-ITS (TR in 2017)

✓**PWI 17572-4: Lane-level Location Referencing**
  - ✓To develop new LR methodology enabling "Which lane?" for C-ITS and "Where in lane?" for ADS (IS in 2018)

*PWI=Preliminary Work Item

"Geographic Data Files 5.1" (PWI 20524)

SIP-adus use-cases identified 34 static map features

guardrail

bird's eye view

target

rubber pole

bird's eye view

target position

road illumination

bird's eye view

target position

intersection lane link

lane link

node on lane link

16
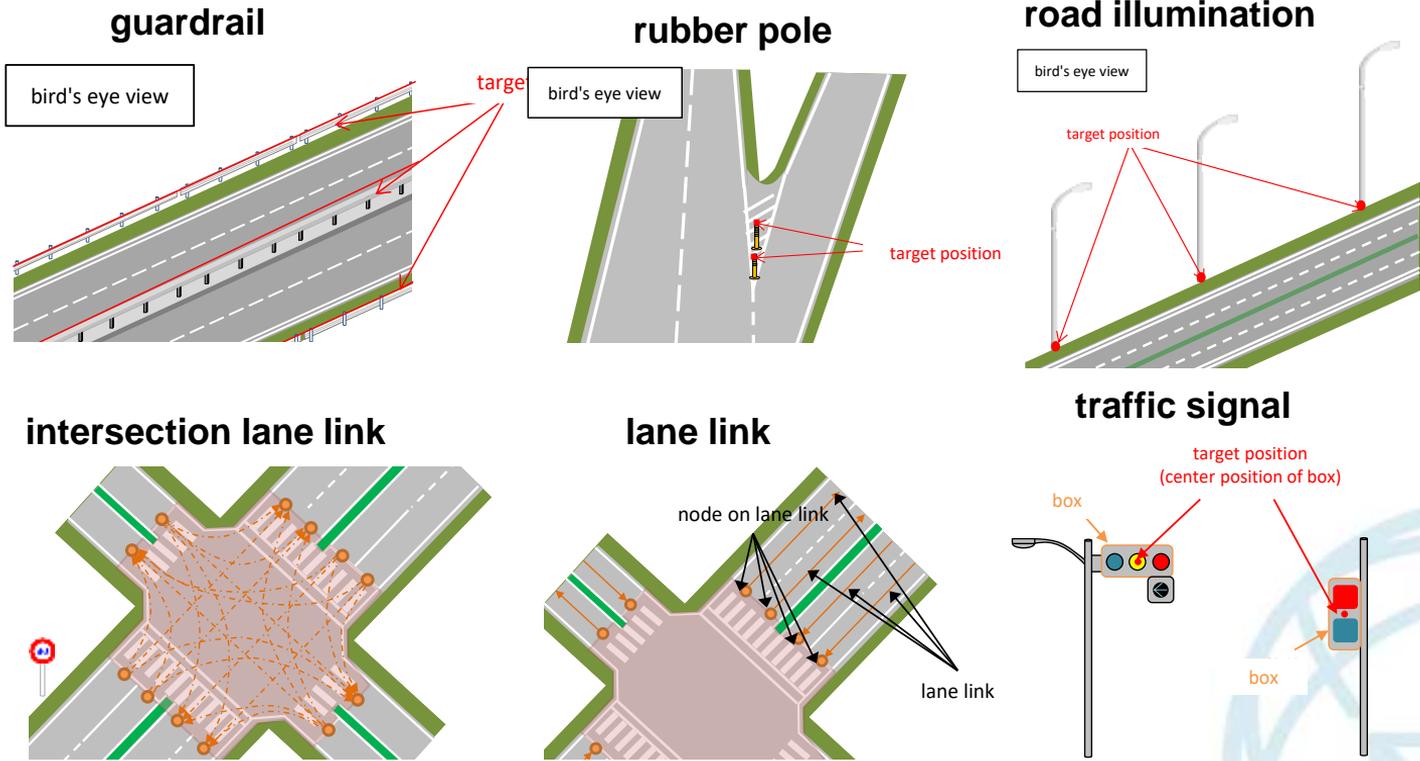

"Geographic Data Files 5.1" (PWI 20524) Belt Concept for ADS and C-ITS

Belt areas, such as lane belt, carriageway belt and PEA, can be determined by physical features and painted features.

road shoulders
- curb
- sidewalk
- guardrail
- side ditch
  etc.

PEA (Potential Evading Area)

Carriageway belt

Lane belt

Intersection belt
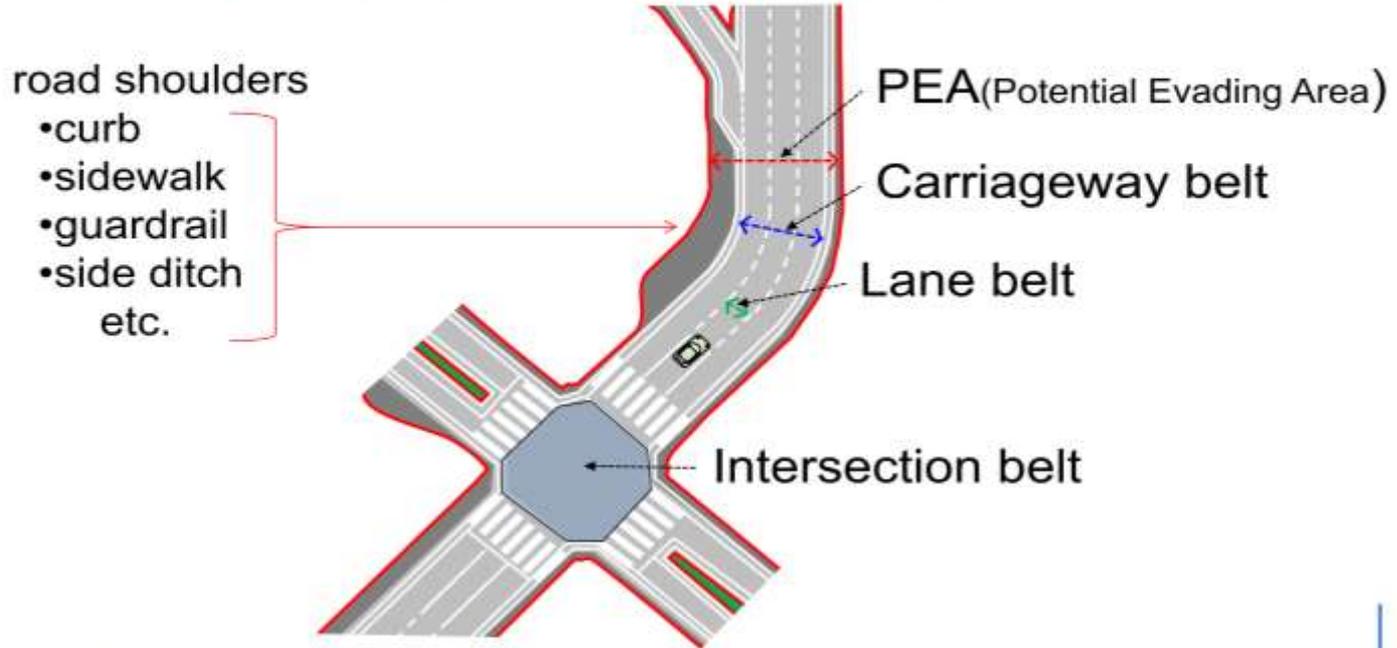

"Spatio-temporal Data Dictionary" (PWI 21718) for ADS and C-ITS

To assemble data dictionary which describes static and dynamic data

→ Targeting Technical Report (2017)

data contents	descriptive names
data type	data message / data set / data module / data frame / data element / common attribute
data category	dynamic / static
definition and description	definition and description of data contents
data structure	definition of data content by XML schema
data content author	authors who published the reference documents
reference documents	normative reference
remarks	other information

18

"Lane-level Location Referencing" (PWI 17572-4) for ADS and C-ITS

To develop new LR enabling "Which lane?" for C-ITS and "Where in lane?" for ADS

Common Reference Point = CRP
-Virtual Digital Infrastructure-

(2) Percentage of geometric distance between CRPs and offset:
% from CRP01 to CRP02

CRP01

(1) Differences from CRP:
△x, △y, △h
from CRP01

1st of 2 lanes (m from the centre)**

No IPR included!

CRP02

Anyone or combination of 2-type locations:
(1) Differences (△) from CRP
(2) Percentage of geometric distance between CRPs and offset

19

FYR: Full Set of WG3 Work Items

under development=in red (with target year); **published=in black (with publication year)**

ISO 17572: Location Referencing (2008) (2015)

PWI 17572-4: Location Referencing – Part 4: Lane-level LR (2018)

NP/CD 17572-2: Location Referencing – Part 2: Pre-coded LR (2016)

NP 19297-1: Shareable Geospatial DBs – Part 1: Framework (2017)

Map Center

Service Center

Vehicle ITS Station

PWI 21718: Spatio-temporal Data Dictionary (2017)

·**Data collection**
·**Data editing**

Server application

Navi application
C-ITS application

Map Center DB

ISO 24099: Navigation Data Delivery (2011)

ISO 17267: API (2009)

Service Center DB

Navigation System DB/ LDM

ISO 14296: C-ITS (2016)

TS 17931: LDM (2013)

ISO 14825: Geographic Data Files (2004) (2011)
PWI 20524: Geographic Data Files 5.1 (2018)

TS 20452: Physical Storage Format (2007)

20

Large Scale Verification Test for ADS

Expected time frame for the commercialization of automated driving systems on highways, etc

Level 2 = automation of two functions out of acceleration, steering, and braking

		Present condition	2017 to 2018	Until 2020	Aimed at achieving by 2020
Highways	Level 2: Following driving + automated lane change, etc	Driving on public roads under verification by companies	Commercialization		
	Level 2: Semi-autopilot (Automated driving mode in limited section)	Driving on public roads under verification by companies	*	Commercialization	
	Level 3: Autopilot (Automated driving mode in limited section)		Institutional investigation and review launched		Commercialization

*Large scale verification test for Dynamic Map, HMI, security, pedestrian, etc. on public roads

*Source: Public-Private ITS Initiative, Roadmap 2016 (May 20, 2016)
