About

SIP-adus Workshop will reach the 9th anniversary in 2022, which is the final year of the second phase of SIP. This is a significant event to conclude the activities we have worked, to hand them over to the next projects and then to transmit information to the world in Kyoto as one of the international cities. After 3 years of virtual workshop, a physical space is prepared to have a relationship and discuss with specialists from inside and outside Japan with enough infection prevention measures. For further development, implementation and cooperation on the automated driving technologies, please come and enjoy sessions to share the latest status of studies for each area and activities in relevant countries, along with panel discussion by experts representing the US, the EU and Japan.
